About Me

Hello, I'm Habibur Rahman, a junior Front-end Developer. I'm familiar with HTML, CSS, Tailwind, JavaScript, Redux & React.js. I love creating projects and am passionate about learning new technology. Currently, I'm learning the Next.js framework. While I can't claim to do everything, I'm eager to join a team, where I can contribute, learn more, and grow. I believe that by immersing myself in a team environment, I can advance my skills and further my professional development. This provides a brief programming-related introduction about me. Thank you for reading carefully.

Projects

RESTRO BOSS

MERN Project

I crafted a restaurant food ordering app using Express, MongoDB, JsonWebToken, and ReactJS. Featuring admin and customer dashboards, Firebase handles authentication, and React Query optimizes data fetching. This project showcases my expertise in MERN development, combining technology seamlessly for an enhanced user experience.

CAR DOCTOR

MERN project

I've developed a Car Repairing website using React, MongoDB, and ReactJS. The website includes an informative About page, a comprehensive Service page showcasing all available services, a convenient Booking page for scheduling repairs, and a Contact page for reaching out. The site is static, providing a user-friendly experience while highlighting my proficiency in front-end and back-end technologies. This project reflects my commitment to creating functional and visually appealing web solutions.
